

clean rain™

downspout diverter

The All In One Rainwater Filtration & Collection System.

- ✓ Collects rainwater from downspouts.
- ✓ Cleans and filters rainwater by removing most of the debris and contaminants.
- ✓ Connects to majority of hoses for immediate use in the garden or around the house.
- ✓ Ideal for rain barrels.
- ✓ Connects to 3" Schedule 40 pipe for use with cisterns.

HOW DOES CLEAN RAIN™ COLLECT CLEANER WATER?

- A Rain Head to deflect leaves and debris away from the flow of water.
- Smart Sense™ First Flush water diverter prevents contaminants contained in the first flush of water from the roof (such as dirt, dust, bird droppings and insects) from being collected.
- Stainless steel mesh screening prevents mosquitoes, bugs and vermin entering your rainwater through Clean Rain™ products.

WHY CATCH RAINWATER?

- **Water conservation**
 - Approximately 60% of water is used outdoors. Collecting and using rainwater is a simple way to conserve water and help the environment.
- **Enriching your garden**
 - soft, pure, chemical free rainwater encourages plant growth.

HOW MUCH WATER CAN BE COLLECTED?

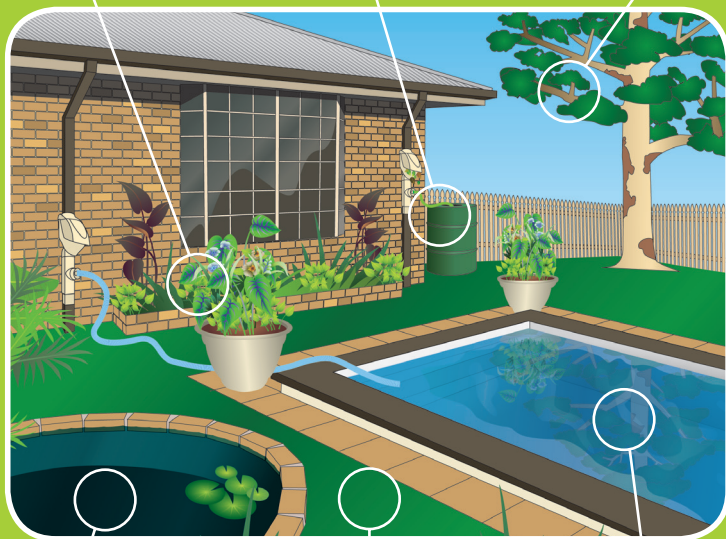

It is simple to work out.

For every inch of rainfall per square foot of roof, you can collect 0.623 gallons. For example, a 60 gallon rain barrel will fill after 1" of rain has fallen on a 100 square foot roof.

GARDENS

RAIN BARRELS & CISTERNS

TREES

GARDEN PONDS

LAWNS

SWIMMING POOLS

COMPATIBLE HOSES

Purchase the hose to suit your needs.

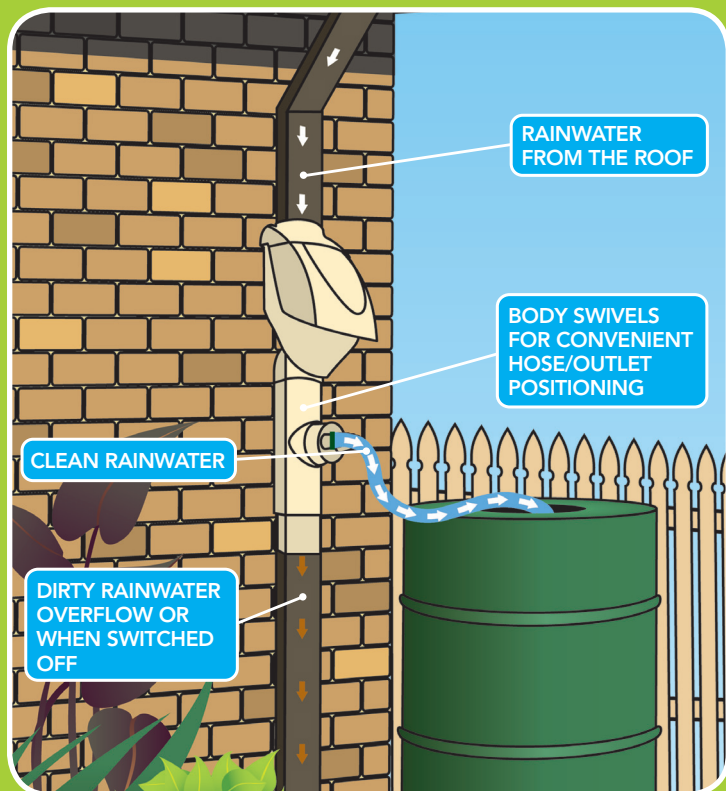

Also fits 3" Schedule 40 pipe

The Ultimate All In One Filtration and Collection System

The Practical Choice for All In One Rainwater Filtration and Collection System

DOWNSPOUT ADAPTORS INCLUDED

Fits 2x3", 3x4" and 3", 4" downspouts

2x3" and 3x4"

3" and 4" round Schedule 40 pipe

HOW CLEAN RAIN ULTRA™ WORKS

Hydro Activated Filtration™ technology uses the rainwater's force to deflect leaves and debris off the screen.

The cover and cap provide a stylish, integrated finish and in colder climates, avert snow.

An easily accessible on/off switch to direct your rainwater for collection or return to normal downspout functioning.

Specially designed overflow mechanism ensures excess water safely overflows down your downspout.

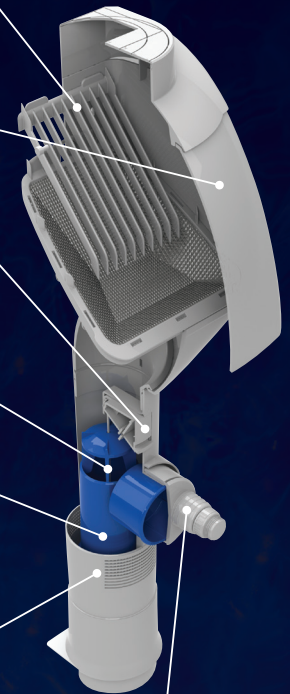

Smart Sense™ First Flush functionality ensures that the majority of contaminants from the roof are flushed down the downspout.

Smart Sense's self regulating valve automatically adjusts to divert the optimum amount of dirty rainwater based on the intensity of the rainfall event.

The hose outlet fits standard garden, pool and sump hoses and the cap removes to fit 3" Schedule 40 pipe.

Clean Rain Ultra™ works automatically for every rainfall event.

Use clean rainwater to top up cisterns, rain barrels, swimming pools, and garden ponds, and to water gardens, trees and lawns.

EASY TO INSTALL, EASY TO USE

- **Easy to install**
 - Just need a hacksaw and drill
 - Body swivels for convenient hose/outlet positioning
 - Fits to common downspouts: 3", 4", 2x3" and 3x4"
- **Works automatically once installed**
- **Minimal maintenance**
- **Can be switched off in winter months**
- **Easily painted to suit any color scheme**
