

# RAIN HARVESTING SUPPLIES

## Component Spec Sheet-Floating Suction Filter, 1", 2"

### General Description

Avoid sucking in settled debris from the bottom of the tank and floating debris from the top of the water level. The benefit of a floating intake filter is that it pulls water from the cleanest portion of the water column, which is just below the surface. This protects the pump system and all post-pump components of the system.

### Specifications

- Filter: 3" diameter x 6.5" long. 30 mesh stainless steel.
- 600 micron.
- Nylon filter connector
- Hose: 2" diameter x 10" long NSF certified drinking water hose
- Adapter: 2" PVC male thread adapter connects to the inside of your tank.
- Buoy: 7" inflatable buoy.

## FILTRATION

## Floating Suction Filter
